## Working with Gradle using Eclipse: -

Old IDE [up to 2018]: you have to install Build ship plugin manually

New IDE [2019+]: No need to separate installation, Build Ship is built-in plugin, so to confirm Build ship plugin is already installed or not. Follow the following steps

Step #1: Open Eclipse

Step #2: Open/Choose the location where you want, then click on Launch

There are two types of way for confirming

    a. Going to Eclipse market place
   b. Go to New Project development option

Follow the below steps you will get an idea

The First way is

Step #3: Go to Help menu choose Eclipse Marketplace

Step #4: Type builship in find, hit enter or click on go

Step #5: Now you can see Build ship plugin is already installed, then close it

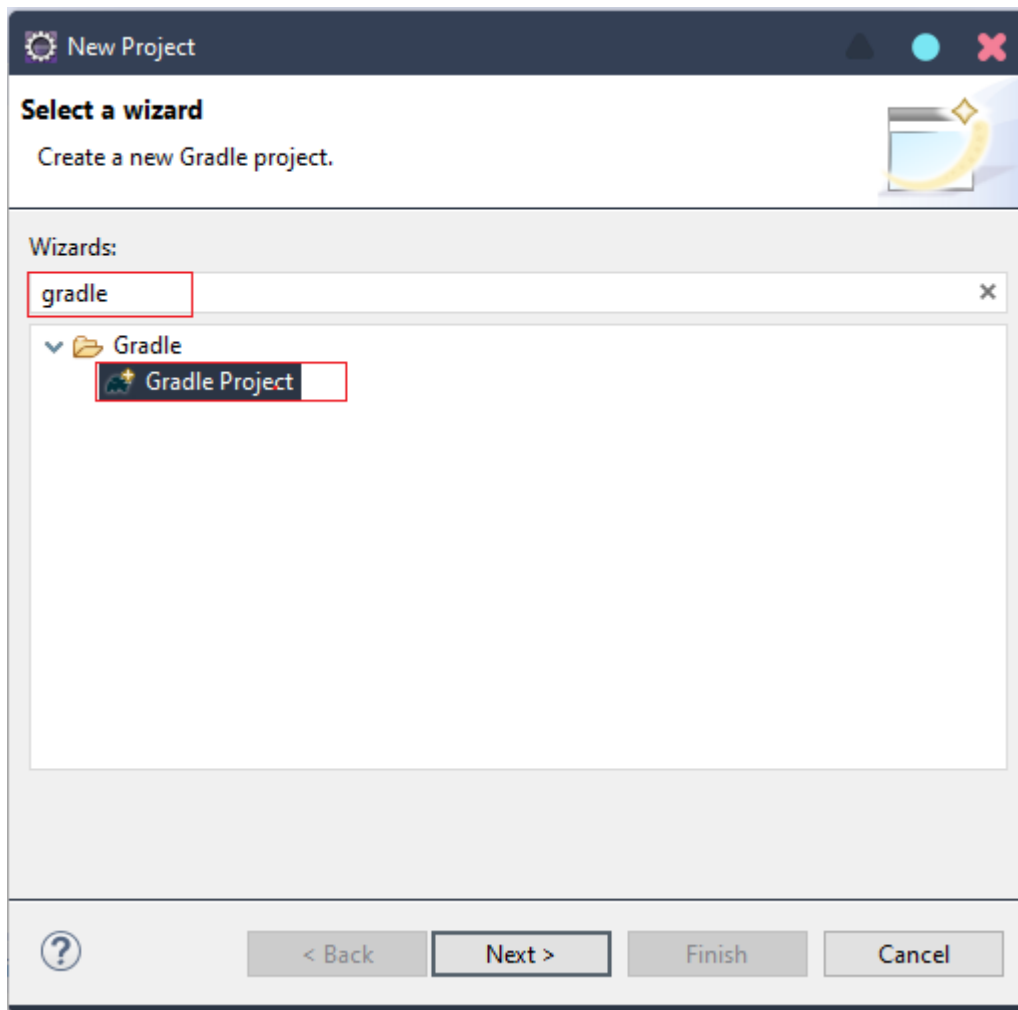

The second way is

Step #6: Go to file menu, click on New then click on Projects

Step #7: Search gradle in the Wizards then you will get a Gradle Project option

This show Build ship plugin is already installed in you Eclipse IDE version
